The Open/Closed Principle

"software entities (classes, modules, functions, etc.) should be open for extension, but closed for modification"

- Bertrand Meyer

No matter the specific techniques involved, historically mass surveillance has had several constant attributes. Initially, it is always the country's dissidents and marginalised who bear the brunt of the surveillance, leading those who support the government or are merely apathetic to mistakenly believe they are immune. And history shows that the mere existence of a mass surveillance apparatus, regardless of how it is used, is in itself sufficient to stifle dissent. A citizenry that is aware of always being watched quickly becomes a compliant and fearful one.

~ Glenn Greenwald, *No Place to Hide*
